

# Wing Camera

## OVERVIEW OF INNOVATION

**When a wing plow is attached to a snowplow in the up position, it is impossible to see out the passenger window while plowing or when pulling out of an intersection. This requires lowering and raising the wing every time or continuously driving with it down, both of which could inadvertently damage a car, sign, mailbox, or anything along the roadway.**

**With a backup camera mounted to the top of the passenger side mirror, you can see over the front mounted wing plow, making it easier to see cars or other obstructions while plowing.**

## BENEFITS

**Drivers can now use the camera to see over the wing** in places they could not see before. This keeps the public and MoDOT drivers safer and reduces claims for damages.
